PROFESSIONAL SUMMARY

Detail-oriented Data Science and AI student with strong capabilities in Python, SQL, and data pipeline development. Experienced in building modular workflows for data preprocessing, feature engineering, and evaluating large datasets. Seeking a Data Engineer Internship to leverage my skills in database management, data analysis, and ETL processes to deliver robust data solutions and actionable insights.

TECHNICAL SKILLS

- **Languages:** Python, SQL, C++, R
- **Databases & Visualization:** MySQL, MongoDB, PowerBI, Tableau
- **Data Engineering & Analysis:** Data Preprocessing, Feature Engineering, Pipeline Architecture, Exploratory Data Analysis (EDA)
- **Tools & Frameworks:** Pandas, NumPy, Scikit-Learn, Matplotlib, Jupyter Notebook, VS Code

WORK EXPERIENCE

AI Engineer Intern Softinator TechLabs

June 2025 – July 2025

- Supported the backend development of the Amazon Nova Support Assistant, contributing to repository adaptation and problem fine-tuning.
- Engineered comprehensive data test suites to validate model performance, enforcing strict pass/fail criteria for data quality and system evaluation.
- Generated custom test cases and modified problem statements to streamline training data workflows and enhance overall evaluation metrics.

PROJECTS

Potato Leaf Disease Classification using Deep Learning

- Developed an end-to-end deep learning pipeline to classify potato leaf diseases into **Early Blight**, **Late Blight**, and **Healthy** categories using Convolutional Neural Networks (CNNs).
- Built and trained image classification models with **TensorFlow**, incorporating **data augmentation** techniques to improve model robustness and generalization.
- Developed a cross-platform mobile application that captures leaf images and predicts disease status in real time.

Technologies: Python, TensorFlow, TensorFlow Datasets, TensorFlow Serving, TensorFlow Lite, FastAPI, React.js, React Native, Google Cloud Platform (GCP), NumPy, OpenCV

Market Basket Analysis and Association Rule Mining

- Developed an end-to-end Market Basket Analysis pipeline using the Apriori algorithm to discover frequent itemsets and hidden associations in transactional retail data.
- Generated and evaluated association rules using support, confidence, and lift metrics to identify product affinities and improve recommendation and cross-selling strategies.

Tech Stack: Python, Pandas, Matplotlib, Jupyter Notebook, Association Rule Mining, Data Analysis

EDUCATION

Devi Ahilya Vishwavidyalaya, School of Data Science & Forecasting M-Tech in Data Science and AI (Integrated) | Indore, India
Oct 2022 – Jun 2027

Sandipani School | Indore, India

High School (11th-12th)

2021 – 2022
